## 1. Introduction

Comsearch analyzed AM and FM radio broadcast stations whose service could potentially be affected by the proposed Cassadaga wind energy project in Chautauqua County, New York.

# 2. Summary of Results

#### **AM Radio Analysis**

Comsearch found eight database records<sup>1</sup> for AM stations within approximately 30 kilometers of the project, as shown in Table 1 and Figure 1. These records represent station WDOE, to northwest of the project, and stations WJTN and WKSN, to the south. Each of these stations is licensed separately for daytime and nighttime operations.

#### **FM Radio Analysis**

Comsearch determined that there were twenty-five database records for FM stations within a 30-kilometer radius of the Cassadaga wind energy project, as shown in Table 2 and Figure 2. Only twenty of these stations are currently licensed and operating, ten of which are low-power or translator stations with limited range.

## 3. Impact Assessment

The exclusion distance for AM broadcast stations varies as a function of the antenna type and broadcast frequency. For directional antennas, the exclusion distance is calculated by taking the lesser of 10 wavelengths or 3 kilometers. For non-directional antennas, the exclusion distance is simply equal to 1 wavelength. Potential problems with AM broadcast coverage are only anticipated when AM broadcast stations are located within their respective exclusion distance limit from wind turbines. The closest AM station to the Cassadaga wind energy project, WDOE, is more than 15 kilometers from the nearest turbine. As there were no stations found within 3 kilometers of the project, which is the maximum possible exclusion distance based on a directional AM antenna broadcasting at 1000 KHz or less, the project should not impact the coverage of local AM stations.

The coverage of FM stations, when the stations are at distances greater than 4.0 kilometers from wind turbines, is not subject to degradation. The closest FM station to the Cassadaga wind energy project, W263CN, is located approximately 9.4 kilometers from the nearest turbine, and falls well outside the area potentially impacted by the project.

#### 4. Recommendations

Since no impact on the AM or FM broadcast stations was identified in our analysis, no recommendations or mitigation techniques are required for this project.
