

Technical Due Diligence Review

Companies considering to buy, sell or invest in existing or new energy projects often seek independent expert advice to hedge their investment risks. RWE helps clients to verify if their energy projects will perform successfully throughout its planned lifetime.

Our Due Diligence service helps energy asset developers, owners, investors, insurers, banks and other lenders to make smart investment decisions. We review and evaluate contractual, technical, financial and risk aspects for acquisition, divestment and development projects. This provides our clients a profound basis for business decisions.

Your Benefits

- Understand and mitigate your project's risks
- Understand the need for and quantify future costs/liabilities
- Understand the risk implications of technical, operational and commercial issues on your project's financial profile
- Ensure that your investment decisions are based on robust data interpretation

Our Approach

Initial review

Only if we have a clear understanding of your techno-economic project objectives and expectations, we will discuss and model together with you a state-of-the-art reference for further benchmarking. In addition, we visit your plant and meet operational staff for interviews.

Expert evaluation

Our Due Diligence services are customized to your needs and include for instance:

- Technical reviews
- Financial modellings
- Risk assessments
- Operation surveys
- Infrastructure/interface assessments
- Benchmarking
- Contract/process analysis

Discussion and presentation

In conclusion, you receive a final result presentation and a detailed written report including issues, risk ratings, associated cost implications and recommendations.
