

Senior Civil Engineer **Thomas Dähre**

Thomas brings 35 years of passionate, quality-focused layout engineering experience to his role as one of our most accomplished senior lead engineers, primarily in the Thermal Generation sector.

Thomas understands that careful considerations of design criteria, overall plant layout, permission ability, operation and maintenance requirements are crucial for sustainable power plant structures. With emphasis on asset protection, planning of site structures and logistics as well as environmental and personal protection he is widely recognized for his contributions to our Engineering Team.

His numerous assignments as coordinator among technical crews and project leader in international power plant projects demonstrate his core competence in being organized, accountable and an excellent communicator.

He earned his Bachelor of Science in Mechanical Engineering from the University of Applied Science Lemgo, Germany.

1 What gives you most satisfaction in your work?

Layout planning is my passion.

2 Why did you choose RWE TI?

Because I am interested in national and international projects and RWE Technology International offers the opportunity to work abroad in a highly interdisciplinary team with colleagues from different cultures.

3 “You get your best solution!” – What it means to me:

It is important to me to listen carefully to your specific requirements and find a tailored solution to fulfil your needs by doing everything I possibly can.
